

“ During Hurricane Katrina, the cell networks and the public phone systems were overwhelmed and we couldn’t get calls through to our buildings across town. This is one of the reasons we purchased REACT! Enterprise, so we would have a reliable means of communicating when other methods failed.”

– **Matt Dick**, Director of Safety, Security, and Emergency Management at Seton

“ I would highly recommend working with the REACT Systems group.”

– **Cheryl Blumenthal**, Information Manager at the Children’s Discovery Museum of San Jose

“ As educators, we are entrusted not only to teach and guide, but to provide a safe and secure environment in which learning can take place. To fulfill that trust, we must be able to respond instantly to any emergency that arises: delivering necessary information to emergency personnel, students, teachers, administration, parents and caregivers. REACT Systems provides that vital link between schools and safety. In an emergency, the REACT communications technology allows us to instantly send and receive information by nearly every means available—cell phones, desk phones, pagers, public address systems, computers, handhelds, displays and more. The REACT system helps get people out of harm’s way and emergency personnel where they need to be, keeping everyone updated as a situation changes. School safety and security have been a lifelong mission for me, and I believe that REACT Systems provides the emergency response system that everyone in education can turn to, use and rely on for that precious margin of safety.

– **Rod Paige**  
U.S. Secretary of Education (2001-2005)

“ REACT Systems provides the vital link between security personnel, first responders and the public to ensure the quick containment of emergency situations. In over two decades of working in the field of international corporate security management, safety and emergency planning, this is the most comprehensive CRNS solution I have seen. The REACT system helps get people out of harm’s way and emergency personnel where they need to be, keeping everyone updated as a situation changes.”

– **Ronald R. Sathre** CPP, President, The PB4Y Group, Inc.,  
and Region II Vice President, ASIS International

“ As both a parent and a school administrator, I know firsthand the risks and challenges that schools face every day. Safety and security are vital, and there is no room for compromise or “just good enough.” In my job, I am responsible for 2400 students across 5 campuses; and my children also attend school, so I demand instant, accurate information and effective action in a crisis. I trust and rely on REACT Systems in our emergency planning to help ensure the safety of students, workplace and community. Only REACT has the ability to quickly receive and relay critical, targeted communications across every device—public address, cell phones, computers, handhelds, desk phones and more. So I know that in seconds, we can alert and inform safety agencies, plus get relevant information to students, teachers and parents. What we need, when we need it—that’s REACT Systems.”

– **Scott Graham**, Director of State and Federal Programs  
Weld County School District RE-8
