

Transportation Solutions

Did you know...

- \$7.3 Billion allocated for transportation security-related programs for 2008 – 2012
- 5,000 airport evacuations each year costing tens of millions of dollars, including liability and loss of productivity
- \$2.03 Billion allocated for port security in 2006
- 6,000 U.S. public transportation systems
- 776,500 busses on the road in 2006
- 336 HAZMAT incidents involving commercial motor vehicles each year

Sector benefits

Including airlines, mass transit systems, railroads and shipping ports, transportation is a critical industry in the world economy, and one that requires increasing levels of emergency preparedness. Nearly 660 million passengers flew on more than 10 million flights US airlines in 2006 and some 32 million Americans ride trains, buses and subways on an average day. In addition, more than 13 million containers will be shipped into the United States in 2007 from foreign ports. Concerns about sabotage and terrorist attacks are leading transportation and public safety officials to adopt new measures and technologies to protect citizens. Critical Response Notification Systems (CRNS) are an important and fast emerging category of IT solutions that address the vital need of organizations and communities for reliable, real-time communications and coordinated action in a crisis.

REACT! Enterprise™

REACT Systems, Inc.™, the innovator and leader in delivering global Critical Response Notification Systems (CRNS) that unify critical actions in emergencies and time-sensitive situations. REACT simultaneously delivers targeted event, location and recipient-specific verifiable communications, such as rich audio/video, SMS text and voice alerts to first responders and those at risk. As a fully scalable, client-server, enterprise solution, REACT can reach millions of users within seconds. The REACT open architecture enables interoperable automated communication with other systems and interagency coordination to reach anybody, anywhere, during crises.

- REACT! Manages emergencies and threats to air travel, ports, borders, and mass transit
- Comprehensive, cost-effective solution
- Real-time, targeted alerting helps reduce loss of life and injury
- Integrates smoothly with automated transportation security systems
- Automates instructional and informational messaging

Why choose REACT?

REACT Systems™, Inc. is the innovator and leader in delivering global Critical Response Notification Systems (CRNS) that unify vital actions in emergencies and time-sensitive situations. REACT enables health care providers, educational institutions, public safety agencies, facility operators and corporations to dramatically improve Critical Response Performance (CRP)SM by assuring incident readiness and real-time, coordinated response. REACT Systems was formerly known as Vasona Technology, Inc.
